Purpose Of Sitemap

A sitemap represents the structure and navigation flow of a website before development.

It helps in understanding:

- How pages are connected.
- How users move from one page to another.
- What pages are required in the project

Low Fidelity Wireframes

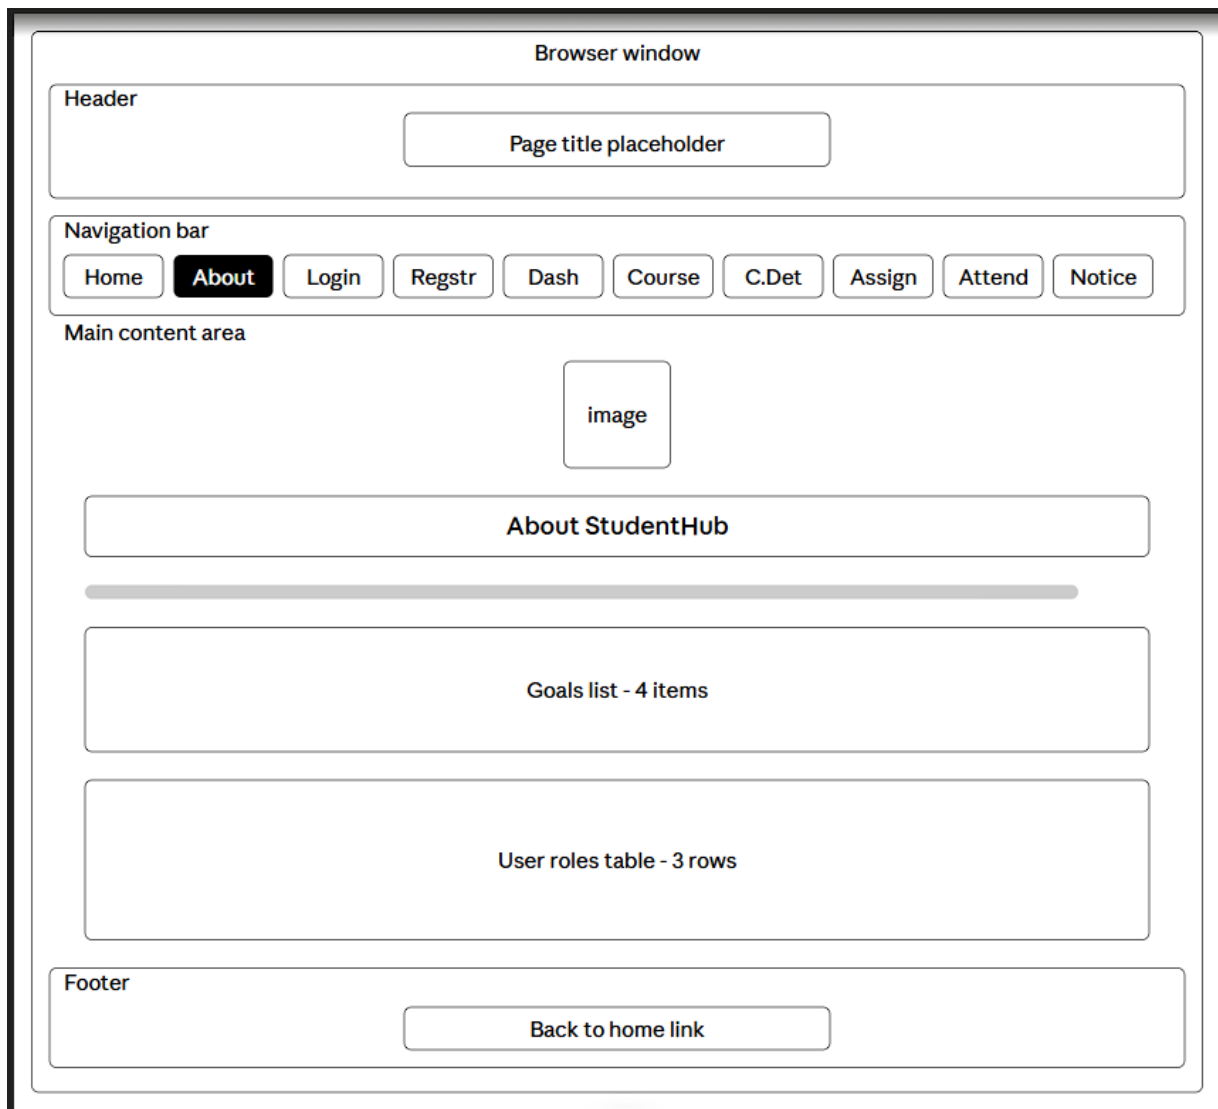

PAGE 1: HOME PAGE (Home.html)

Purpose:

Landing page introducing StudentPortal and its main features.

PAGE 2: ABOUT PAGE (About.html)

Purpose:

Give list of goals and the particular roles for the student portal

PAGE 3: LOGIN PAGE (Login.html)

Browser window

Header

Page title placeholder

Navigation bar

Home About **Login** Registr Dash Course C.Det Assign Attend Notice

Main content area

Student login

Login form - username and password fields

button Link to register page

Footer

Back to home link

Purpose:

It register the student into the student portal.

PAGE 4: REGISTER PAGE (Register.html)

Browser window

Notice

Main content area

Student registration

Registration form - name, email, roll no, password

button

Link to login page

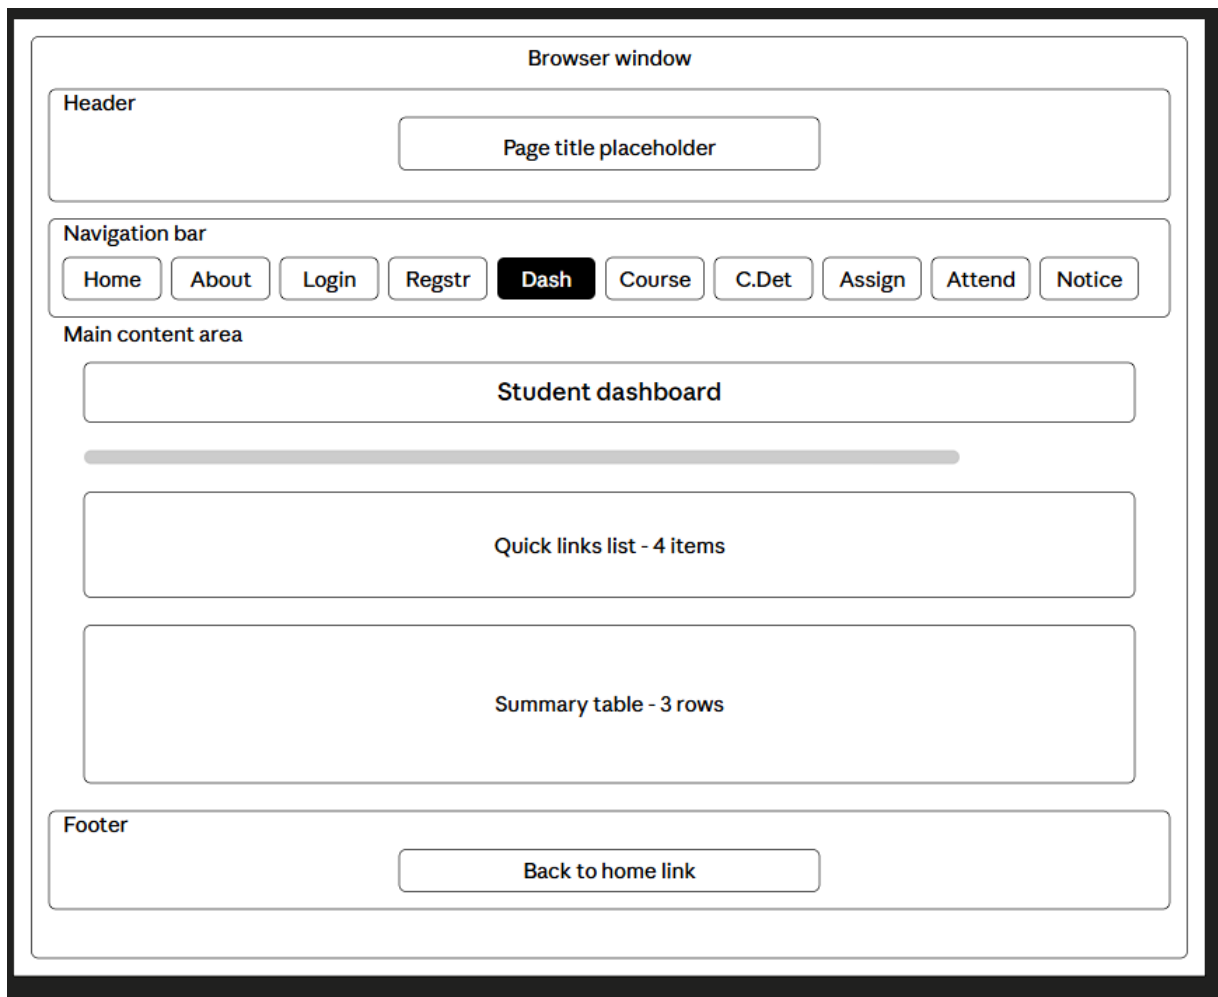

Footer

Back to home link

Purpose:

It register the name and full details of the student who registers.

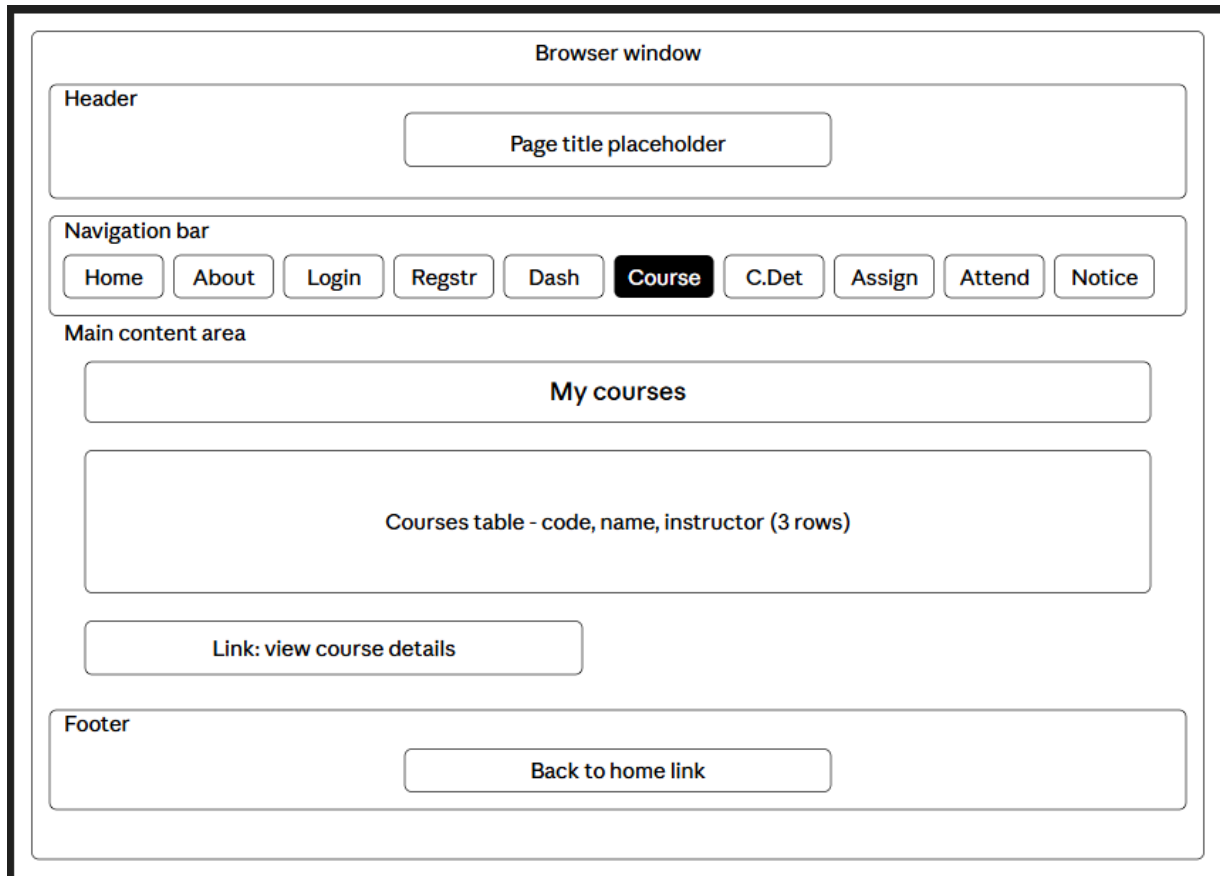

PAGE 5: DASHBOARD (Dashboard.html)

Purpose:

It will give the gateway for four pages of assignment, attendance, course, notice.

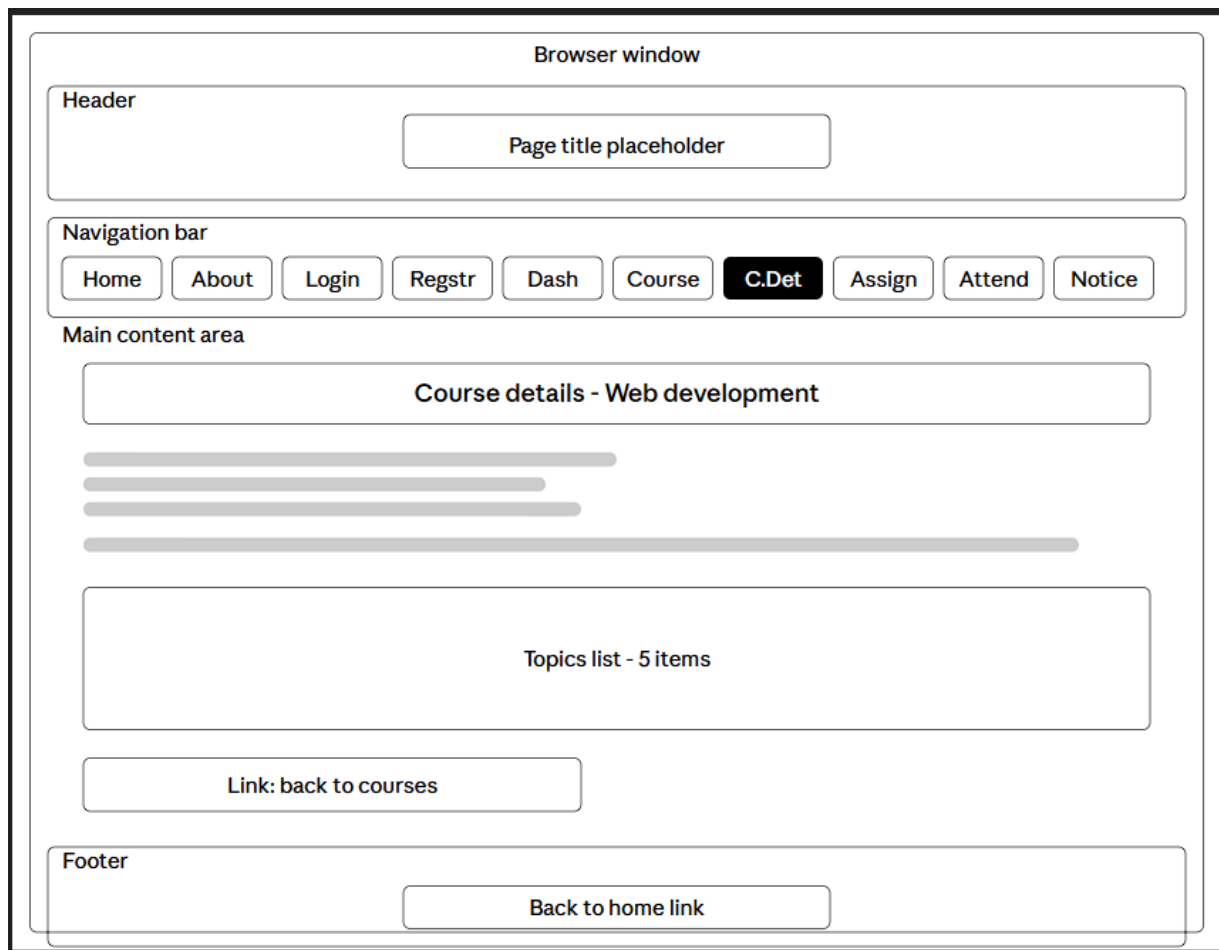

[PAGE 6: COURSES PAGE \(Courses.html\)](#)

Purpose:

Lists open courses along with their application deadlines.

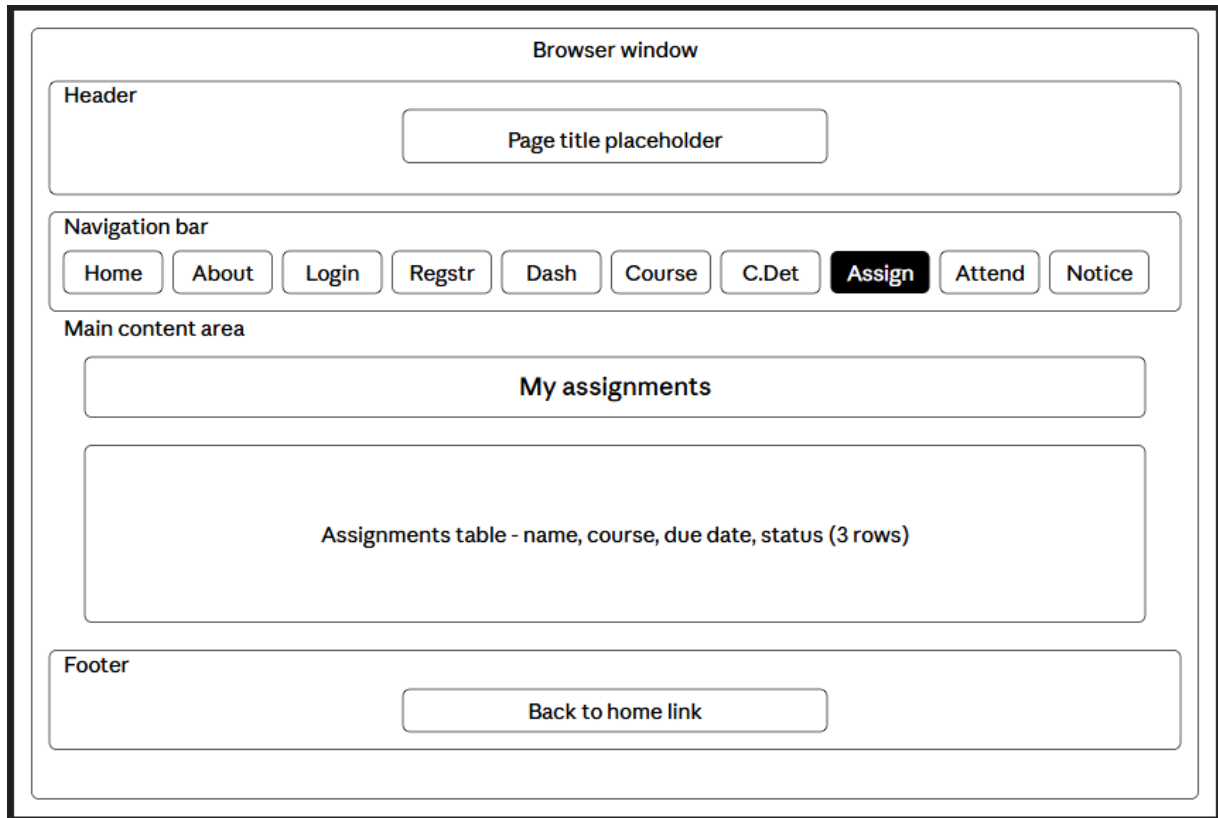

PAGE 7: COURSEDETAILS PAGE (Coursedetails.html)

Purpose:

It falls under course page and give all the details about courses in the university/college.

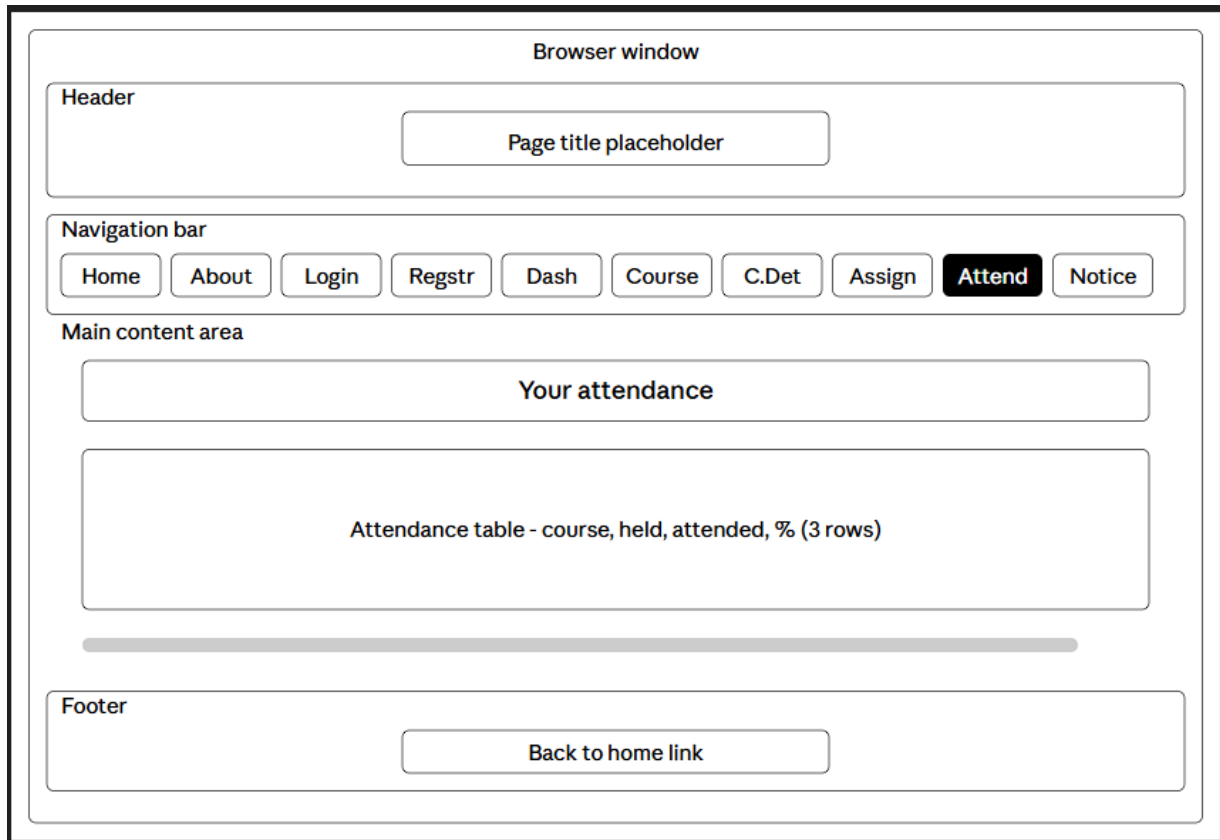

[PAGE 8: ASSIGNMENTS PAGE \(Assignments.html\)](#)

Purpose:

It give basics details of all the assignments of the university and due date also.

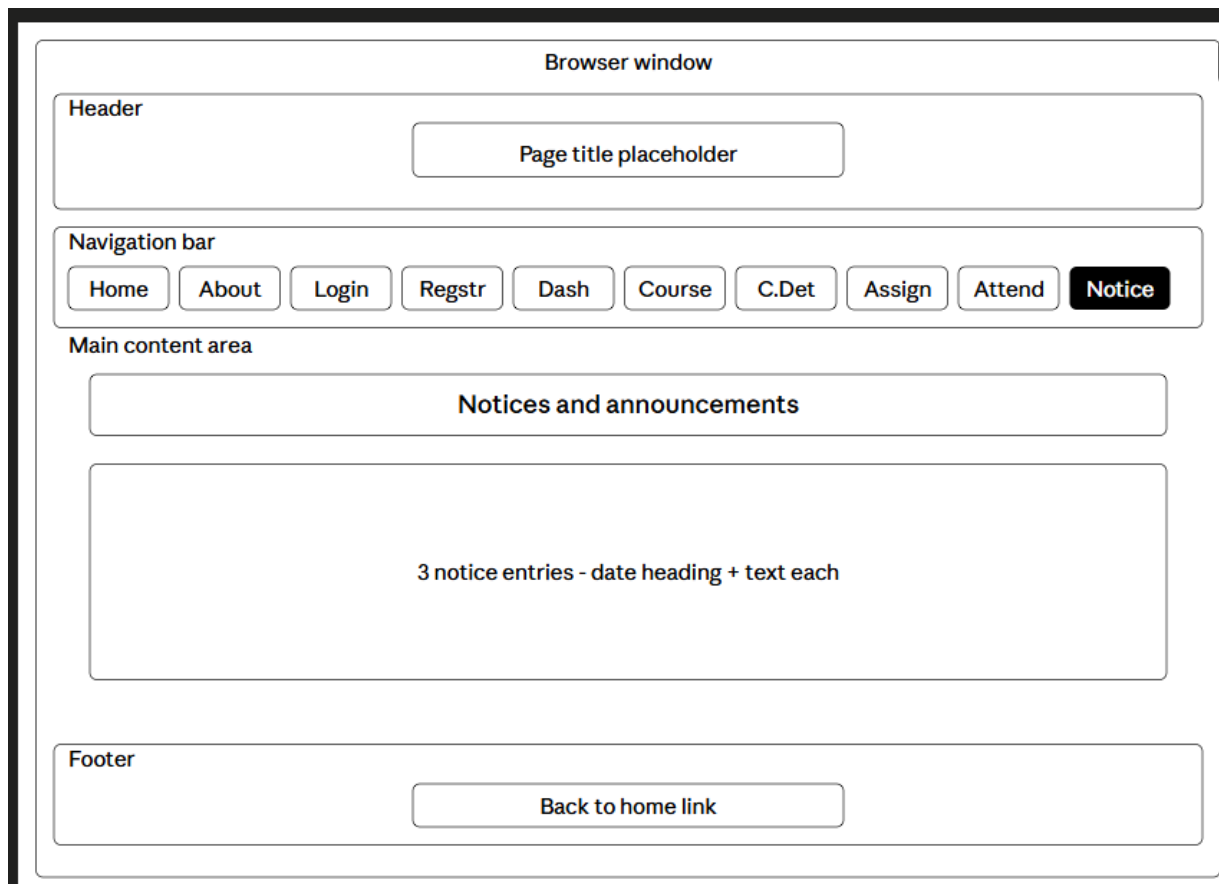

[PAGE 9: ATTENDANCE DIRECTORY \(Attendance.html\)](#)

Purpose:

It give the information about the attendance of the students.

[PAGE 10: NOTICE PAGE \(Notice.html\)](#)

Purpose:

It give all the notice of the university which are very important.

Conclusion

In this practical, the initial planning phase of the StudentPortal website was completed. The project requirements were identified, a sitemap was prepared to define the site structure, and low-fidelity wireframes were designed for each of the ten pages to visualize layout and navigation before writing any HTML. These planning steps give a clear blueprint for the site and help keep development organized and consistent across pages.
